Portfolio Résumé: Online résumé (this site)

PROFESSIONAL SUMMARY

Software engineer with IT infrastructure roots in systems and network administration, now focused on application development. Builds backend APIs and services with Node.js and NestJS, models data in PostgreSQL, and connects them to React and TypeScript frontends — then deploys and operates the whole system on Linux with Docker, Docker Compose, and Nginx. That cross-layer background turns into engineering outcomes: services designed to behave predictably in production, repeatable deployments, and debugging that spans application code, networks, and servers. The Sherafat Gold Platform — a React frontend behind a NestJS API gateway, with multiple backend services, PostgreSQL databases, and a Docker Compose deployment — is the clearest example of that end-to-end work.

TECHNICAL SKILLS

Backend and APIs

Node.js · NestJS · REST API design · API gateways · JWT authentication · API documentation · WebSocket integration · Service integration

Deployment and infrastructure

Docker · Docker Compose · Nginx reverse proxy · TLS configuration · CI/CD (GitHub Actions) · Deployment and web operations · Environment configuration

Systems and data

Linux · Systems and network administration · Networking and troubleshooting · PostgreSQL · SQL · Production debugging · Data analysis

Frontend

React · TypeScript · JavaScript · HTML · CSS · Responsive UI · Component-based architecture

Engineering practices

Maintainability · Debugging · Documentation · Security-conscious operations · Cross-layer architecture

No proficiency ratings or year counts are listed, because none are verified.

PROFESSIONAL EXPERIENCE

Software Development & Marketing Engineer

23 September 2025 – 21 May 2026

Ghasdak Peyk Shahr (قاصدک پیک شهر) · Remote

Remote engineering role combining frontend development with infrastructure, deployment, and web operations responsibilities.

`Frontend development` `DevOps and software infrastructure` `Website management and maintenance` `CI/CD and software deployment` `Website security` `Data analysis` `Digital marketing`

- Developed and maintained frontend functionality for web-based products and business websites.
- Supported application infrastructure, deployment, and operational maintenance.
- Contributed to CI/CD and software delivery workflows.
- Performed website troubleshooting and security-related operational tasks.
- Contributed to data analysis and digital marketing activities alongside software development responsibilities.
- Worked remotely to support ongoing development and operational activities.

Draft descriptions supplied by Ahmad Azimi — responsibilities, not measured performance outcomes. No metrics, team sizes, or budgets are claimed.

note

Only the verified record above is published. Earlier roles, education, and certifications will be added once source material is available.

SELECTED PROJECTS

Sherafat Gold Platform

Software engineer — frontend, service integration, and deployment · Ongoing

An ongoing software engineering project focused on a gold-price platform with a web frontend and multiple backend services.

React · TypeScript · Vite · MUI · NestJS · PostgreSQL · API gateway · Docker Compose · Nginx · WebSockets

Frontend Engineering & Application Interfaces

Frontend engineer · Selected work

Selected frontend work: component-based interfaces, responsive layouts, typed React implementation, and API integration that stays maintainable.

React · TypeScript · JavaScript · HTML · CSS · Responsive UI · Component architecture · REST integration · Forms and validation

Systems, Deployment & Infrastructure

Systems and deployment engineering · Selected work

Verified experience with Linux servers, Docker Compose stacks, Nginx configuration, CI/CD pipelines, TLS, and operational troubleshooting.

Linux · Docker · Docker Compose · Nginx · TLS/certbot · CI/CD · GitHub Actions · Web operations · Backup and restore

SECTIONS AWAITING VERIFIED INFORMATION

`Education — to be completed`

Degrees, institutions, and graduation dates will be added from verified information.

`Languages — to be completed`

Language proficiency will be listed based on verified information.

`Certifications — to be completed`

Only verified certifications and professional credentials will be included.

`Earlier experience — to be completed`

Previous roles, responsibilities, and timelines will be added from verified career records.

ADDITIONAL INFORMATION

- Open to international, remote, and relocation opportunities.
- Works comfortably in remote, distributed settings — the most recent role was fully remote.
- Written technical documentation alongside code: architecture, development, and deployment guides.
